Division 5-15, Inc.

PROJECT OVERVIEW

The Oak Avenue Pump Station Project consisted of the demolition of existing facilities, relocation of existing piping and site features, and the construction of a new vector dump station and associated features. This project was completed on a small site with non-stop operation of the existing pump station.

SERVICES PROVIDED

ICM Group, Inc. provided construction management and inspection services. Our resident engineer verified construction quality, resolved field issues, and reviewed change order requests, project schedule, and submittals. Our inspector provided daily construction inspection and documentation of construction conditions. ICM also provided material testing and administrative services.
